## SUV's On Jupiter?

Are humans responsible for climate change on the outer reaches of the solar system, or is it the sun?

*Paul Joseph Watson*  
Prison Planet  
Thursday, November 16, 2006

Kofi Annan today slammed global warming skeptics as being "out of step" and "out of time," but how will altering human activity halt climate change when the evidence clearly indicates that the sun itself and not SUV's is heating up the entire solar system?

"The U.N. chief lamented "a frightening lack of leadership" in fashioning next steps to reduce global emissions. "Let us start being more politically courageous," he urged the hundreds of delegates from some 180 member nations of the 1992 U.N. climate treaty," reports **Forbes**.

But how do we square the fact that almost every planet in our solar system is simultaneously undergoing temperature change and volatile weather patterns. Does this not suggest that global warming is a natural cycle as a result of the evolving nature of the sun? Can Al Gore fill me in on this one?

### - **Space.com: Global Warming on Pluto Puzzles Scientists**

In what is largely a reversal of an August announcement, astronomers today said Pluto is undergoing global warming in its thin atmosphere even as it moves farther from the Sun on its long, odd-shaped orbit.

### - **Space.com: New Storm on Jupiter Hints at Climate Change**

The latest images could provide evidence that Jupiter is in the midst of a global change that can modify temperatures by as much as 10 degrees Fahrenheit on different parts of the globe.

**- Current Science & Technology Center: Global Warming on Mars?**

A study of the ice caps on Mars may show that the red planet is experiencing a warming trend. If both Mars and Earth are experiencing global warming, then perhaps there is a larger phenomenon going on in the Solar System that is causing their global climates to change.

**- United Press International: NASA looks at a monster storm on Saturn**

NASA says its Cassini spacecraft has found a hurricane-like storm at Saturn's South Pole, nearly 5,000 miles across -- or two-thirds Earth's diameter.

**- Science Agogo: Global Warming Detected on Triton**

There may not be much industrial pollution on Neptune's largest moon, but things are hotting up nonetheless. "At least since 1989, Triton has been undergoing a period of global warming," confirms astronomer James Elliot, professor of Earth, Atmospheric and Planetary Sciences at Massachusetts Institute of Technology. "Percentage-wise, it's a very large increase."

**- Associated Press: Study says sun getting hotter**

Solar radiation reaching the Earth is 0.036 percent warmer than it was in 1986, when the current solar cycle was beginning, a researcher reports in a study to be published Friday in the journal Science. The finding is based on an analysis of satellites that measure the temperature of sunlight.

**- London Telegraph: The truth about global warming - it's the Sun that's to blame**

Global warming has finally been explained: the Earth is getting hotter because the Sun is burning more brightly than at any time during the past 1,000 years, according to new research.

The simple fact is that throughout the ages the earth has swung wildly between a warm, wet, stable climate, to a cold, dry and windy one - long before the first fossil fuel was burned. The changes we are now witnessing are a walk in the park compared to the battering that our planet has taken in the past.

This is not a defense of the oil cartels or the Neo-Con wreckers, who would have every motivation to ignore global warming whether it is man-made or not.

Nor is it a blanket denial of the fact that the earth is getting very gradually hotter, but how do we reconcile global warming taking place at the farthest reaches of the solar system with the contention that it is caused by human activity? Have our exhaust fumes left earth's atmosphere and slipped through a black hole to Triton?

The assertion that global warming is man made is so oppressively enforced upon popular opinion, especially in Europe, that expressing a scintilla of doubt is akin to holocaust denial in some cases. Such is the insipid brainwashing that has taken place via television, newspapers and exalted talking heads - global warming skeptics are forced to wear the metaphoric yellow star and only discuss their doubts in hushed tones and conciliatory frameworks, or be cat-called, harangued and jeered by an army of do-gooders who righteously believe they are rescuing mother earth by recycling a wine bottle or putting their paper in a separate trash can.

Fearmongering about an imminent climate doomsday also hogs news coverage and important environmental issues like GM food, mad scientist chimera cloning and the usurpation and abuse of corporations like Monsanto flies under the radar.

Global warming is cited as an excuse to meter out further control and surveillance over our daily lives, RFID chips on our trash cans, GPS satellite tracking and taxation by the mile, as well as a global tax at the gas pump.

The extremist wing of the environmentalist movement, characterized by people like **Dr. Erik Pianka**, advocate the mass culling of humanity via plagues and state sanctioned bio-terrorism, in order to "save" the earth from the disease of humanity. Nazi-like genocidal population control measures and the environmental establishment have always held a close alliance.

The orthodox organized religion of global warming and its disastrous consequences for our freedom of speech, freedom of mobility and our right to remain outside of the system, needs to be questioned on the foundational basis that the phenomenon is solar-system wide and it is mainly caused by the natural evolution of the sun and not human activity.
